

# Shameless Advertisement

Shor the Duck wants to create a curated collection of some of the best uniquely-Codebreaker problems and a more beginner-friendly place for people in Singapore's Informatics Olympiad or Competitive Programming community to chat/discuss!

As a result, he has put this new problem as the first problem in his problemset!

He has also realised that this is a great place to advertise the collection and the server as a whole!

Discord Server link: <https://discord.gg/G5W5yMAn3u>

Group/Collection link: <https://codebreaker.xyz/group/shorsgcollection>

He thus poses this problem to you:

Print his advertisement!

Specifically, print **exactly** the text given in the box below, including the same capitalisation, punctuation, and ensure the two lines are actually on two separate lines.

Finally, ensure you print nothing else.

Note for the future:

Before doing input and output, **as the first line inside your main function**, you should have this line of code:

```
ios::sync_with_stdio(0); cin.tie(0);
```

Don't use endl when outputting a newline!

Use the `\n` character instead!

```
cout << '\n';
```

or

```
cout << "This is the first line\nThis is the next line";
```

## Input Format

Your program should **not** read from standard input for this problem, because there is no input for this problem.

## Output Format

Your program must print to standard output.

The output should consist of **exactly** the text given in the box above, including the same capitalisation, punctuation. Ensure the two lines are actually on two separate lines.

## Subtasks

There are no subtasks for this problem, because there is no input.

## Sample Testcase 1

Input: (There is no input, the box is left empty on purpose)

□

Output:
